Patent No. 6410325

GENERAL INFORMATION:
APPLICANT: C. Frank Bennett
APPLICANT: Sugan M. Freier
APPLICANT: Andrew T. Watt
TITLE OF INVENTION: EXPRESSION
FILE REPRENEUR: RY. 2020
CURRENT APPLICATION NUMBER: US/09/851,896
CURRENT FILING DATE: 2001-05-08
NUMBER OF SEQ ID NOS: 89
SEQ ID NOS: 89
US-09-662-250A-76

Sequence 76, Application US/09662250A

Sequence 76, Application US/09662250A

Sequence 76, Application US/09662250A

GENERAL INFORMATION:

APPLICANT: Breet P. Monia

APPLICANT: Jacqueline Wyatt

APPLICANT: APPLICANT: ANTISENSE MODULATION OF PHOSPHORYLASE KINASE BETA EXPRESSION

TITLE OF INVENTION: ANTISENSE MODULATION OF PHOSPHORYLASE KINASE BETA EXPRESSION

FILE REFERENCE: RTS-0129

CURRENT APPLICATION NUMBER: US/09/662,250A

CURRENT FILING DATE: 2000-09-14

NUMBER OF SEQ ID NOS: 102

SEQ ID NO 76

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 24, Application US/09657346A

TITLE OF INVENTION: REPEAT MARKERS
TITLE OF INVENTION: REPEAT MARKERS
TITLE OF INVENTION: REPEAT MARKERS
CURRENT APPLICATION NUMBER: US/09/157,177

CURRENT FILING DATE: 1998-09-18

EARLIER PRILING DATE: 1997-09-19

NUMBER OF SEQ ID NOS: 135

CONTWARE PATENTION OF: 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-09-199-542B-21/C

Sequence 21, Application US/09199542B

Patent No. 647921S

GENERAL INFORMATION

APPLICANT: Schumm, James W.

TITLE OF INVENTION: Multiplex Amplification of Short Tandem Repeat Loci
FILE REFERENCE: 16026/9212

CURRENT APPLICATION NUMBER: US/09/199,542B

CURRENT FILING DATE: 1998-11-25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Sequence 11, Application US/08757223

Sequence 11, Application US/08757223

Patent No. 6136530

GENERAL INFORMATION:

APPLICANT: Poduslo, Shirley E.

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR ASSESSING RISK

TITLE OF INVENTION: FACTORS IN ALZHEIMER'S DISEASE

NUMBER OF SEQUENCES: 13

CORRESPONDENCE ADDRESS:

ADDRESSEE: Locke Purnell Rain Harrell

STREET: 2200 Ross Avenue, Suite 2200

CITY: Dallas

STATE: Texas

STATE: Texas

STATE: HBM PC compatible

COMPUTER: READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: BM PC compatible

COMPUTER: PATENTIN RC-DOS/MS-DOS

Patent No. 6458532

GENERAL INFORMATION:

APPLICANT: Becra-Wadleigh, Sevilla D.
Gershon, Elliot S.
Badner, Judith A.
Goldin, Lynn R.
Berrettini, Wade H.
Yoshikawa, Takeo
Sanders, Alan R.
Esterling, Lisa Markers and Diagnostic
TITLE OF INVERTION: Chromosomal Markers and Diagnostic
TITLE OF INVERTION: Chromosomal Markers and Diagnostic
Tests for Manic-Depressive Illness
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0.6%; Score 15.4; DB 1; Length 20; 94.1%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-09-289-267-165

Sequence 165, Application US/09289267A

Sequence 165, Application US/09289267A

Patent No. 6046320

GENERAL INFORMATION:

APPLICANT: Lex M. Cowsert

TILLO PO INVENTION: ANTISENSE MODULATION OF MDMX EXPRESSION

FILE REFERENCE: RTS-0049

CURRENT APPLICATION NUMBER: US/09/289,267A

CURRENT FILING DATE: 1999-04-04

NUMBER OF SEQ ID NOS: 166

SEQ ID NO 165

LENGTH: 20
Sequence 162, Application US/09289267A
